Adding a Glideshow to your Spark Page

Adobe Spark Page offers some amazing and easy-to-use layout components that will help you bring stories to life. Among these features is Glideshow, a scroll-enabled experience that adds motion and dimension to your photos and text.

Add photos to your Glideshow

Edit your story through the process of creating a Glideshow for your web page. Start by choosing to add a Glideshow to your page. You’ll then need to add some photos to be used in the background (as shown in Figure 1). Choose photos from your computer using the upload button or select photos from a variety of other online options (as shown in Figure 2) — including Creative Cloud, Lightroom, Dropbox, or start an image search on Adobe Stock.

In the example above, we’ll upload a few images from Creative Cloud, then we’ll arrange them in the order we want them to appear within our web page. When the photos appear in the correct order, click save to return to the main web page editor.

Add content to your Glideshow

With your photos selected, scroll through your Glideshow in order to add content above each photo (see Figure 3). Select the text option in order to add a content box that will be associated with the background image. Format your title in a heading style while leaving the content in a standard paragraph style. Once you’ve added the content for the first image in your Glideshow, continue scrolling through your page and add content for the remaining photos.

After adding all of your content, click the Preview button at the top of the browser window to preview the scroll-activated parallax animation experience (as demonstrated in Figure 4).

Watch a step-by-step demo of this workflow in an e-learning webinar.

Learn to create engaging, interactive content with Spark Page. Import photos, add audio and video, and use stunning animation to add life to your photos. The amazing glideshow allows you to "tell your story" with an animated and engaging multimedia experience.
