

# Adobe Acrobat DC

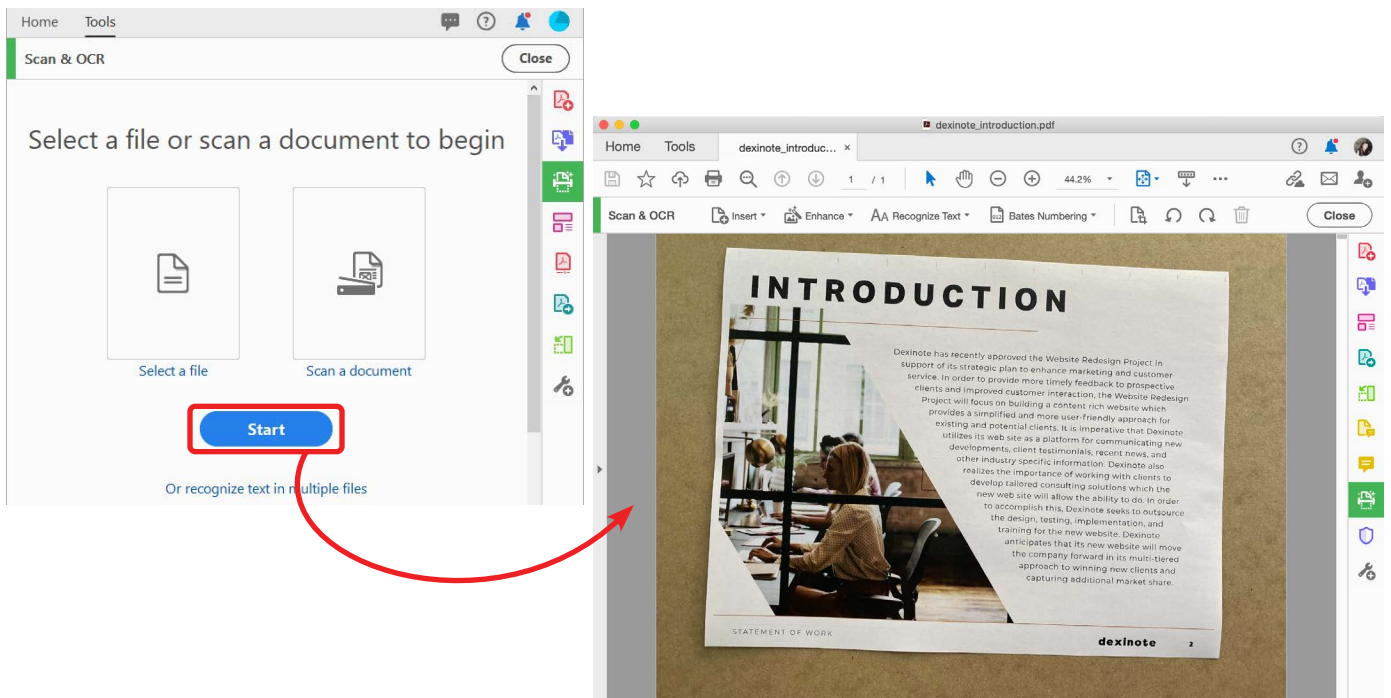

## Scan & OCR

Convert scans or images of documents into searchable, editable PDF files, and adjust the quality of the resulting file.

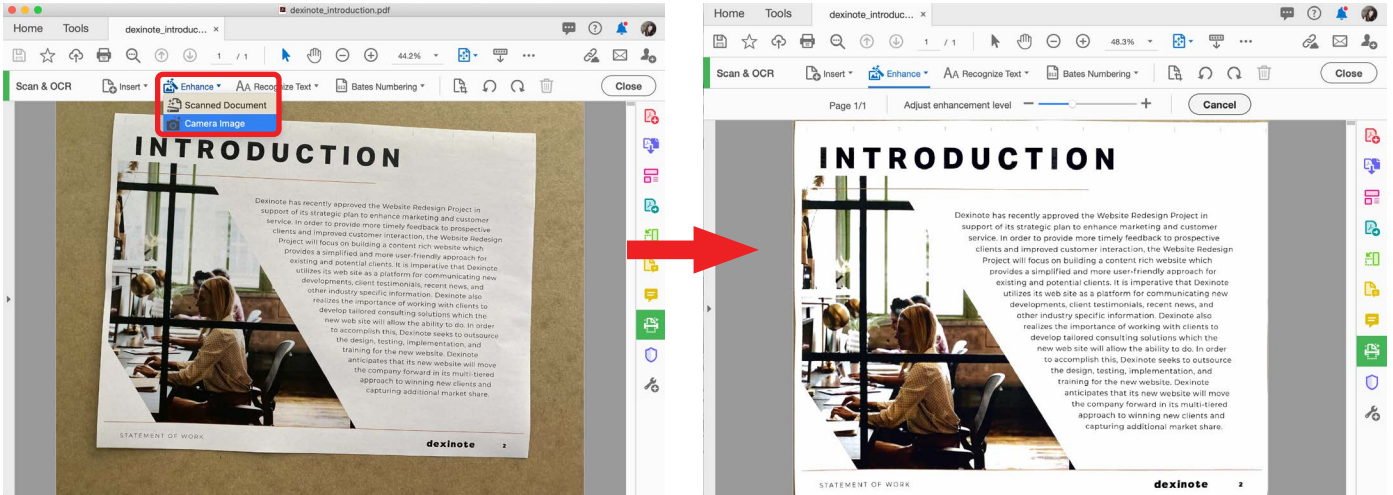

1. In Acrobat DC, select **Scan & OCR** from the Tools center or pane.

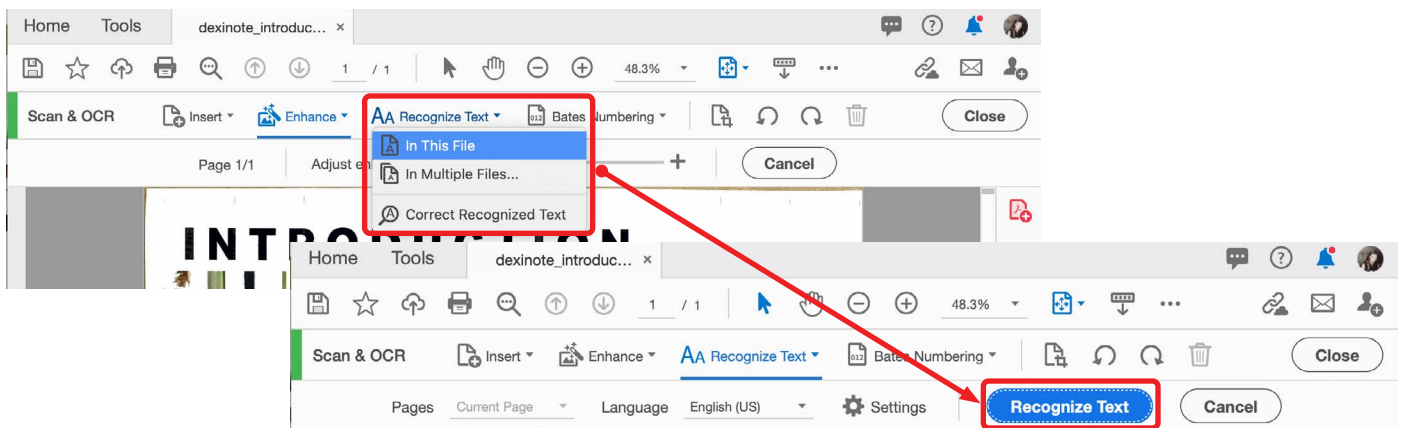

2. Select a file. This file could be a photo of a document, or an already scanned file created using a scanner or the Adobe Scan mobile app. Or you can scan a document to create a new file using a connected scanner.

3. To enhance the document, choose which type of file you opened, a **Scanned Document** or a **Camera Image**. Click **Enhance** to clean up the image.

4. Acrobat automatically recognizes text from scanned documents. To manually recognize text on image files select **Recognize Text**. The file is now a searchable, editable PDF file.
