# Technical Sneak Peek

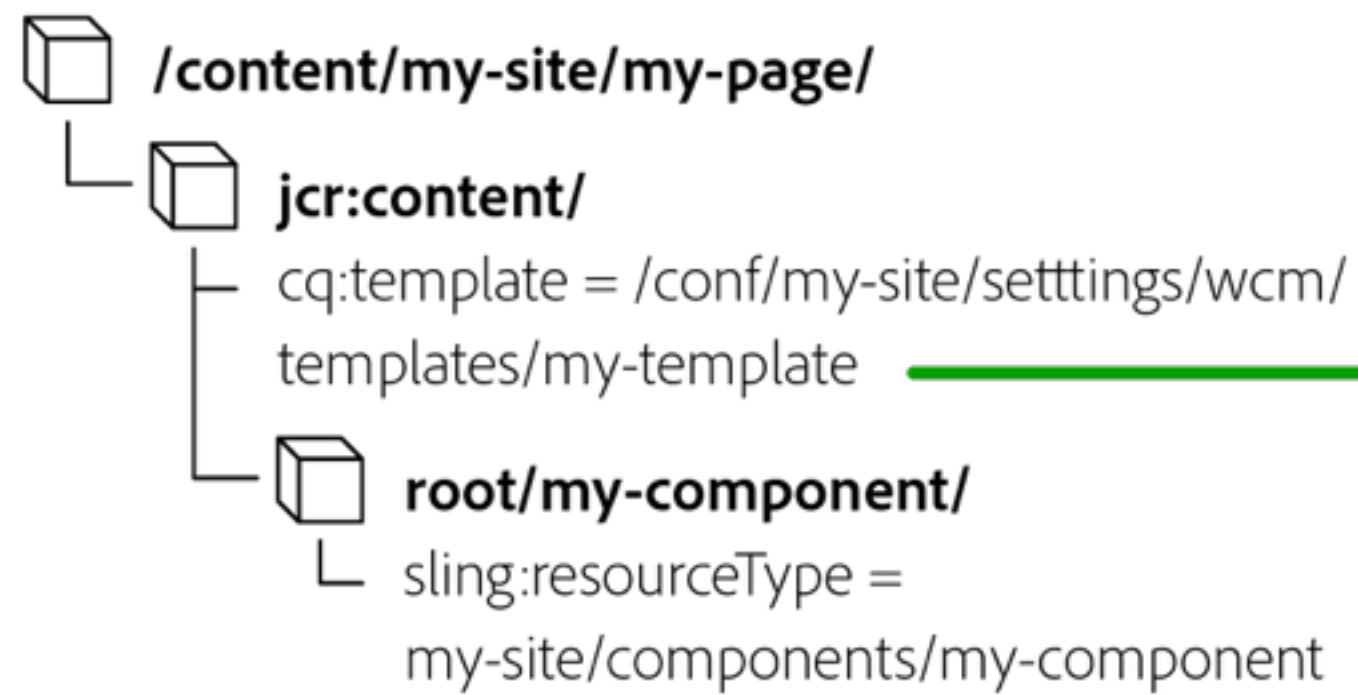

- Omni Search
- Reference Implementation
- Content Fragments
- Template Editor
- Coral UI 3
- Sightly Synthetic Resources

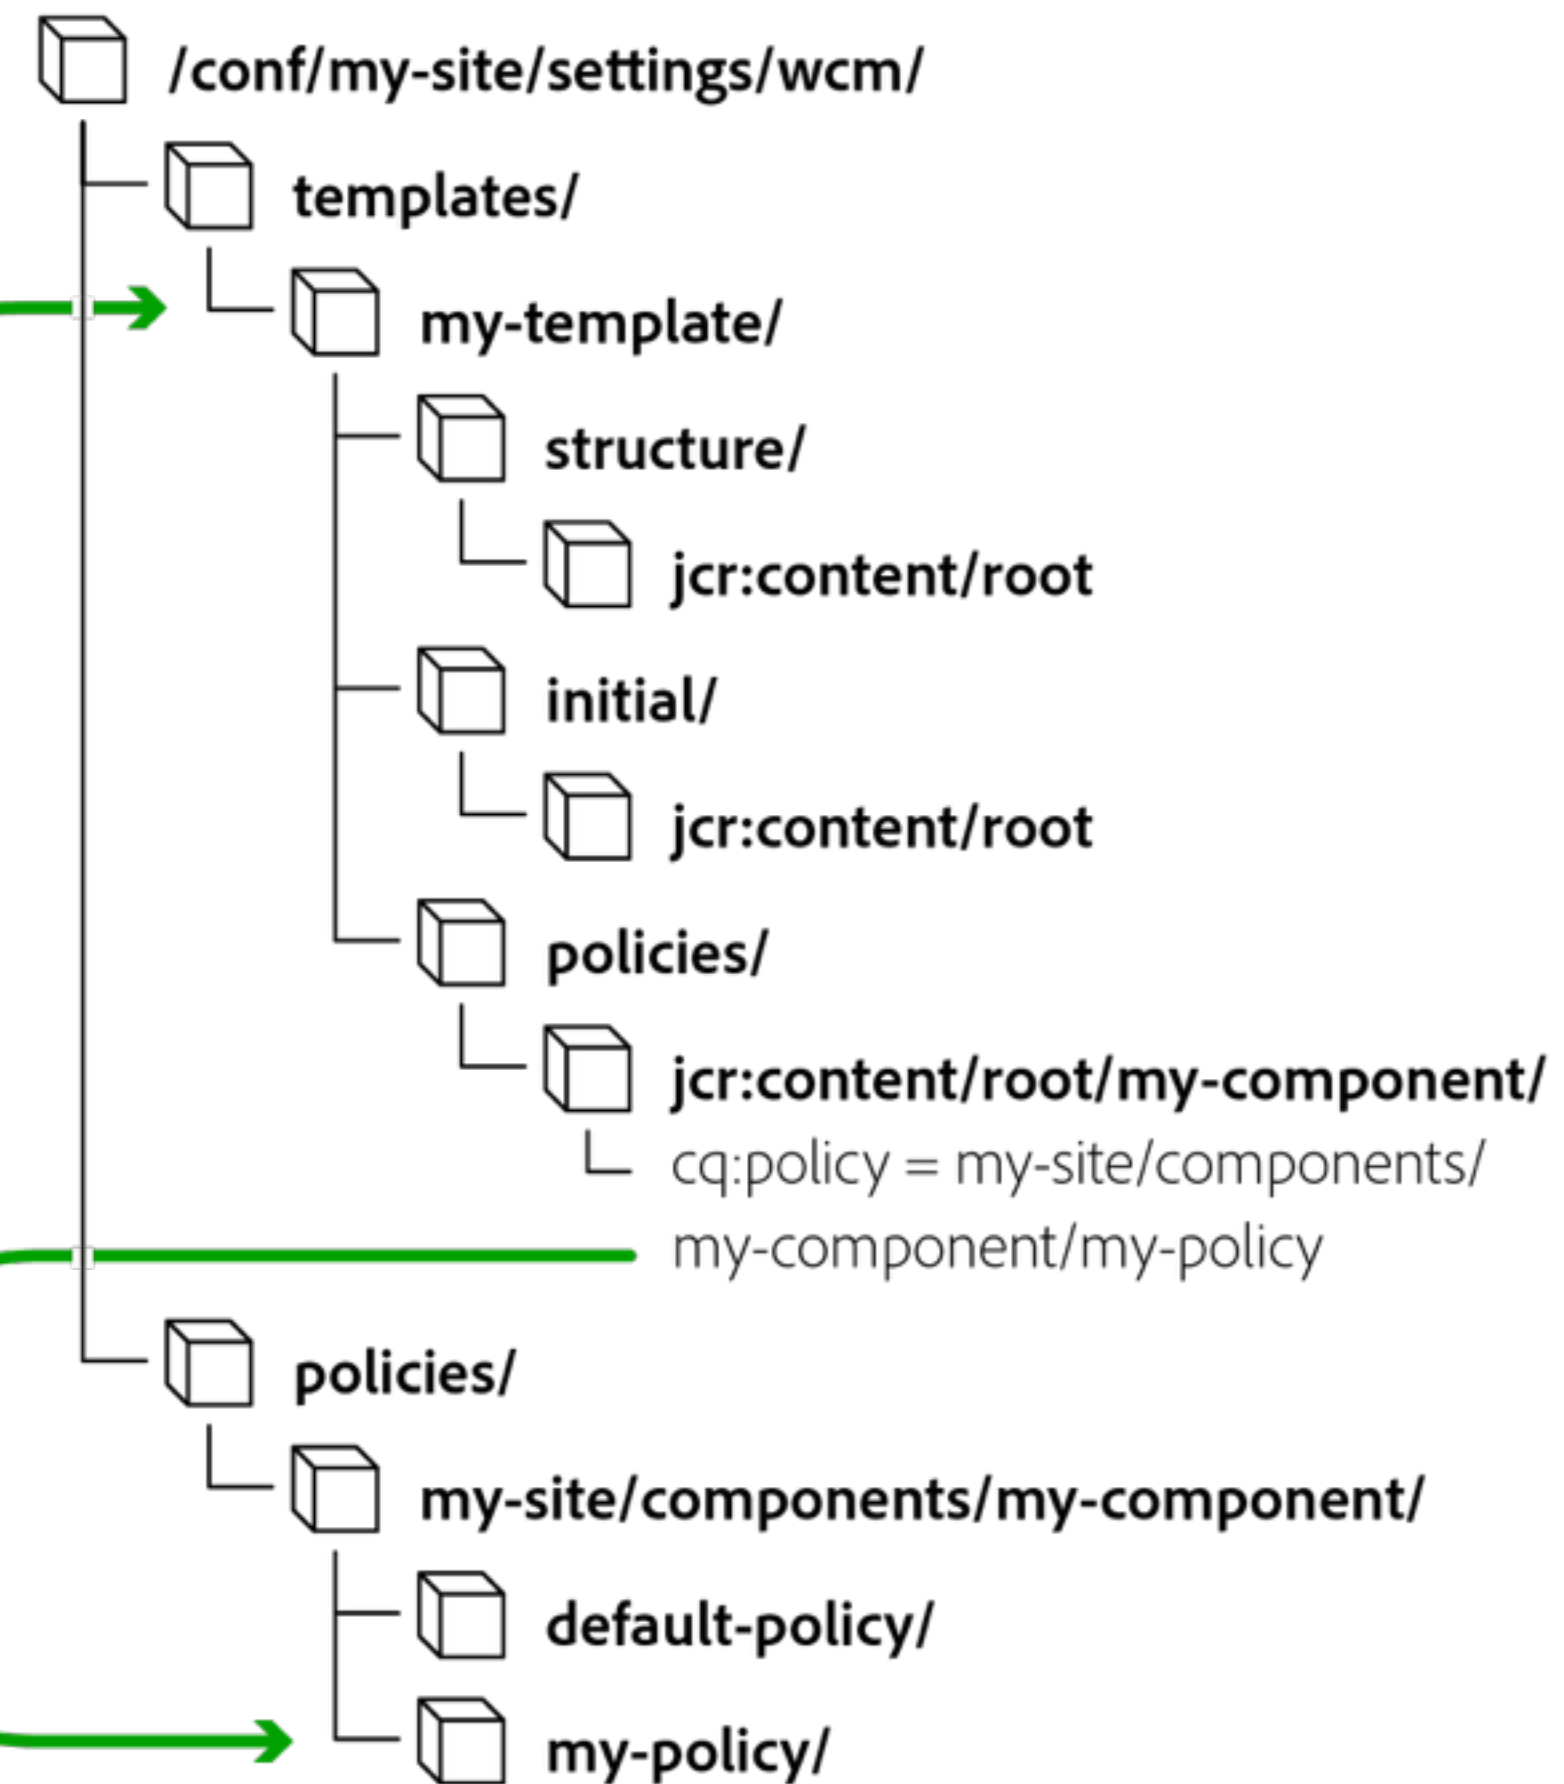

# DEMO

# Template Editor

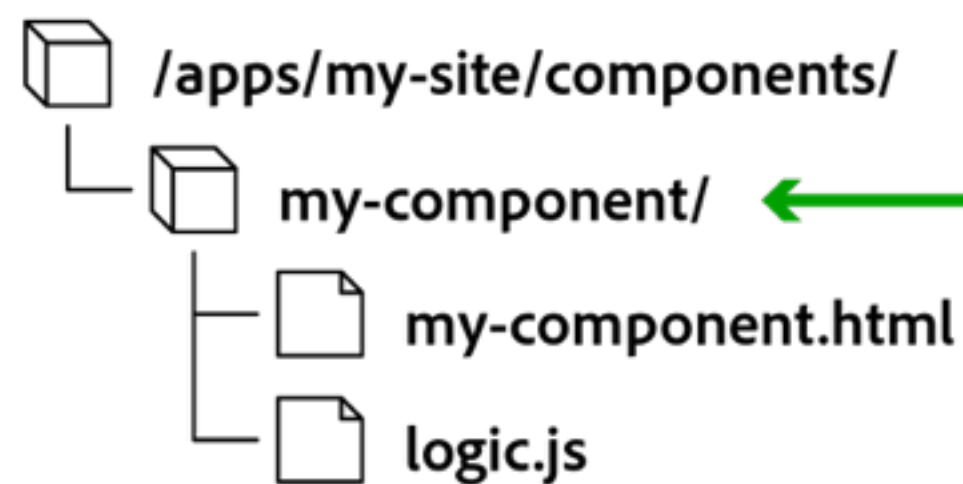

## CONTROLLER CONTENT STRUCTURE

## CONFIGURATION TEMPLATES & CONTENT POLICIES

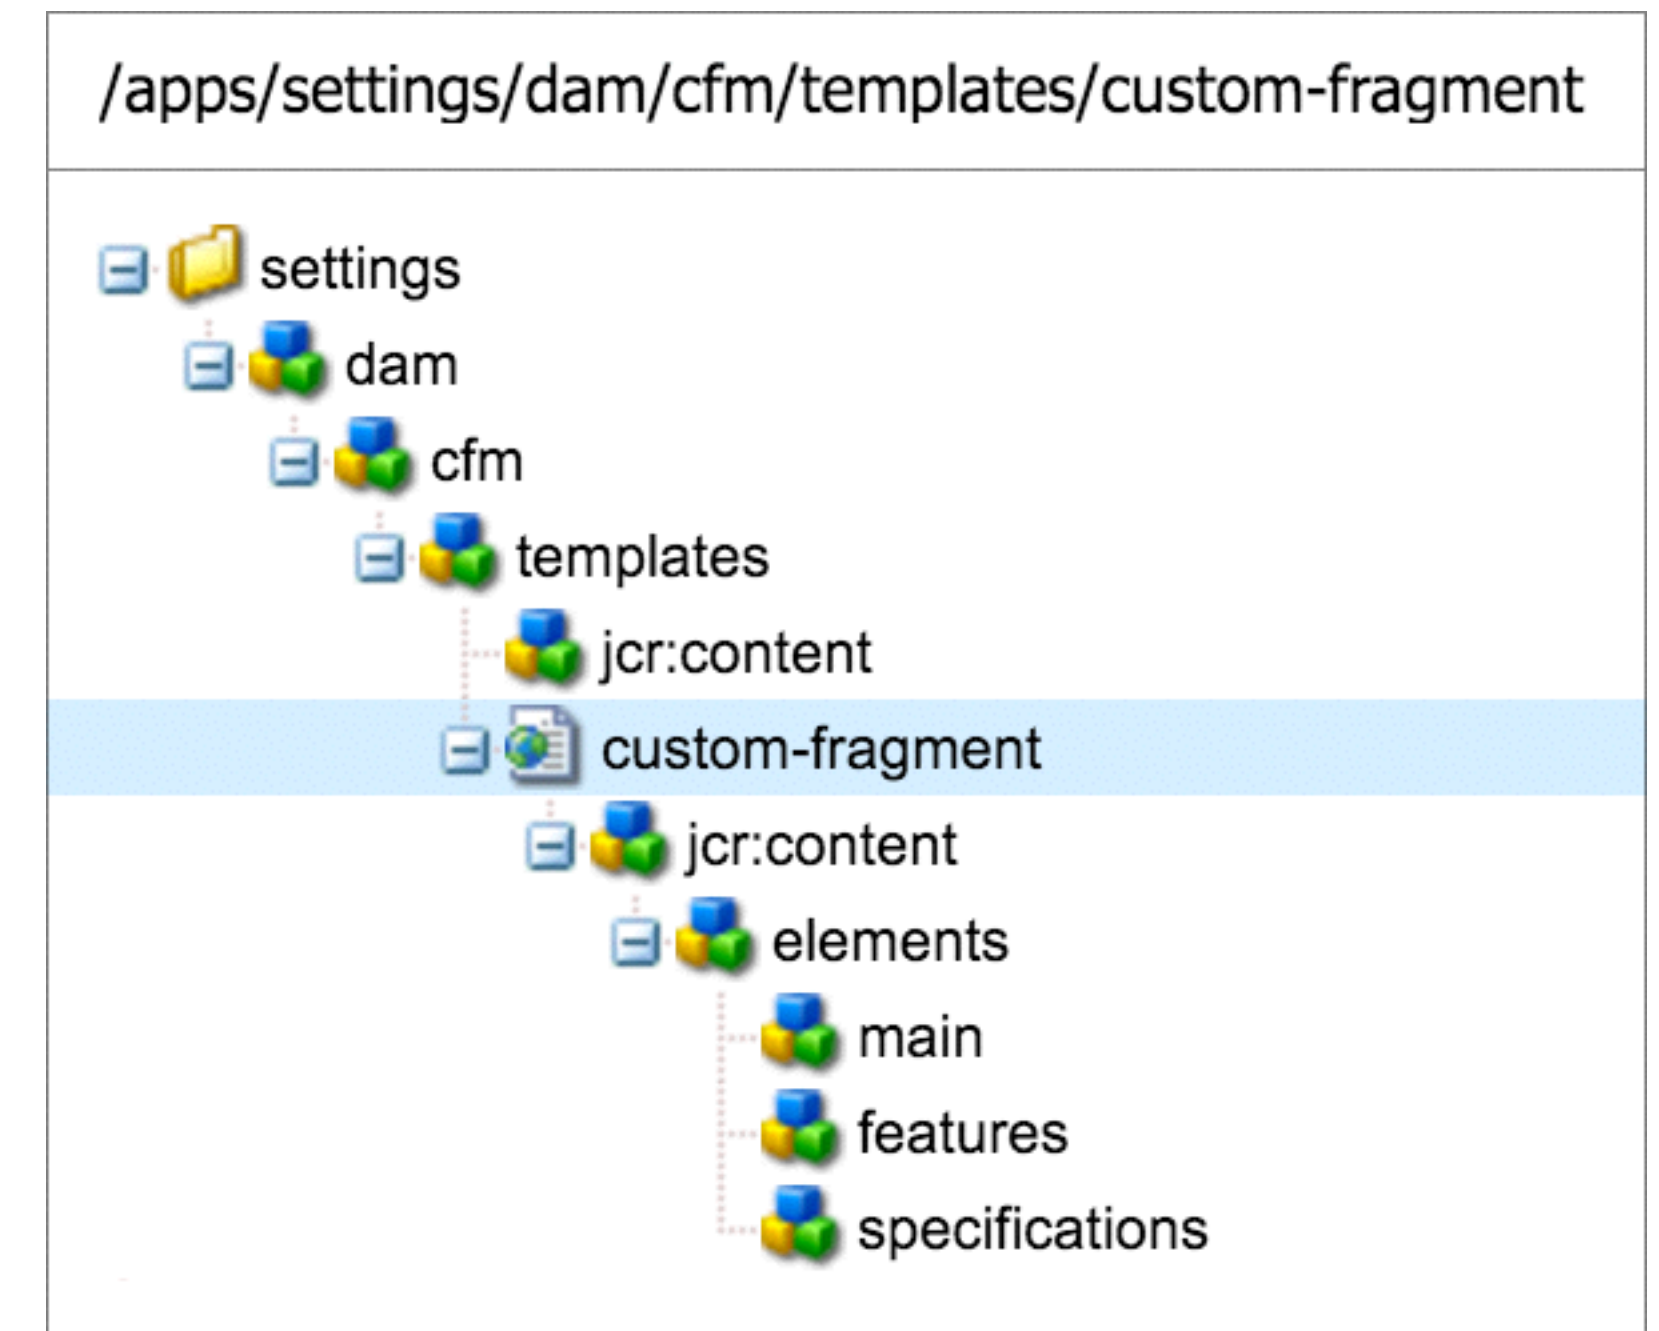

## VIEW COMPONENTS

# Content Fragments Templates

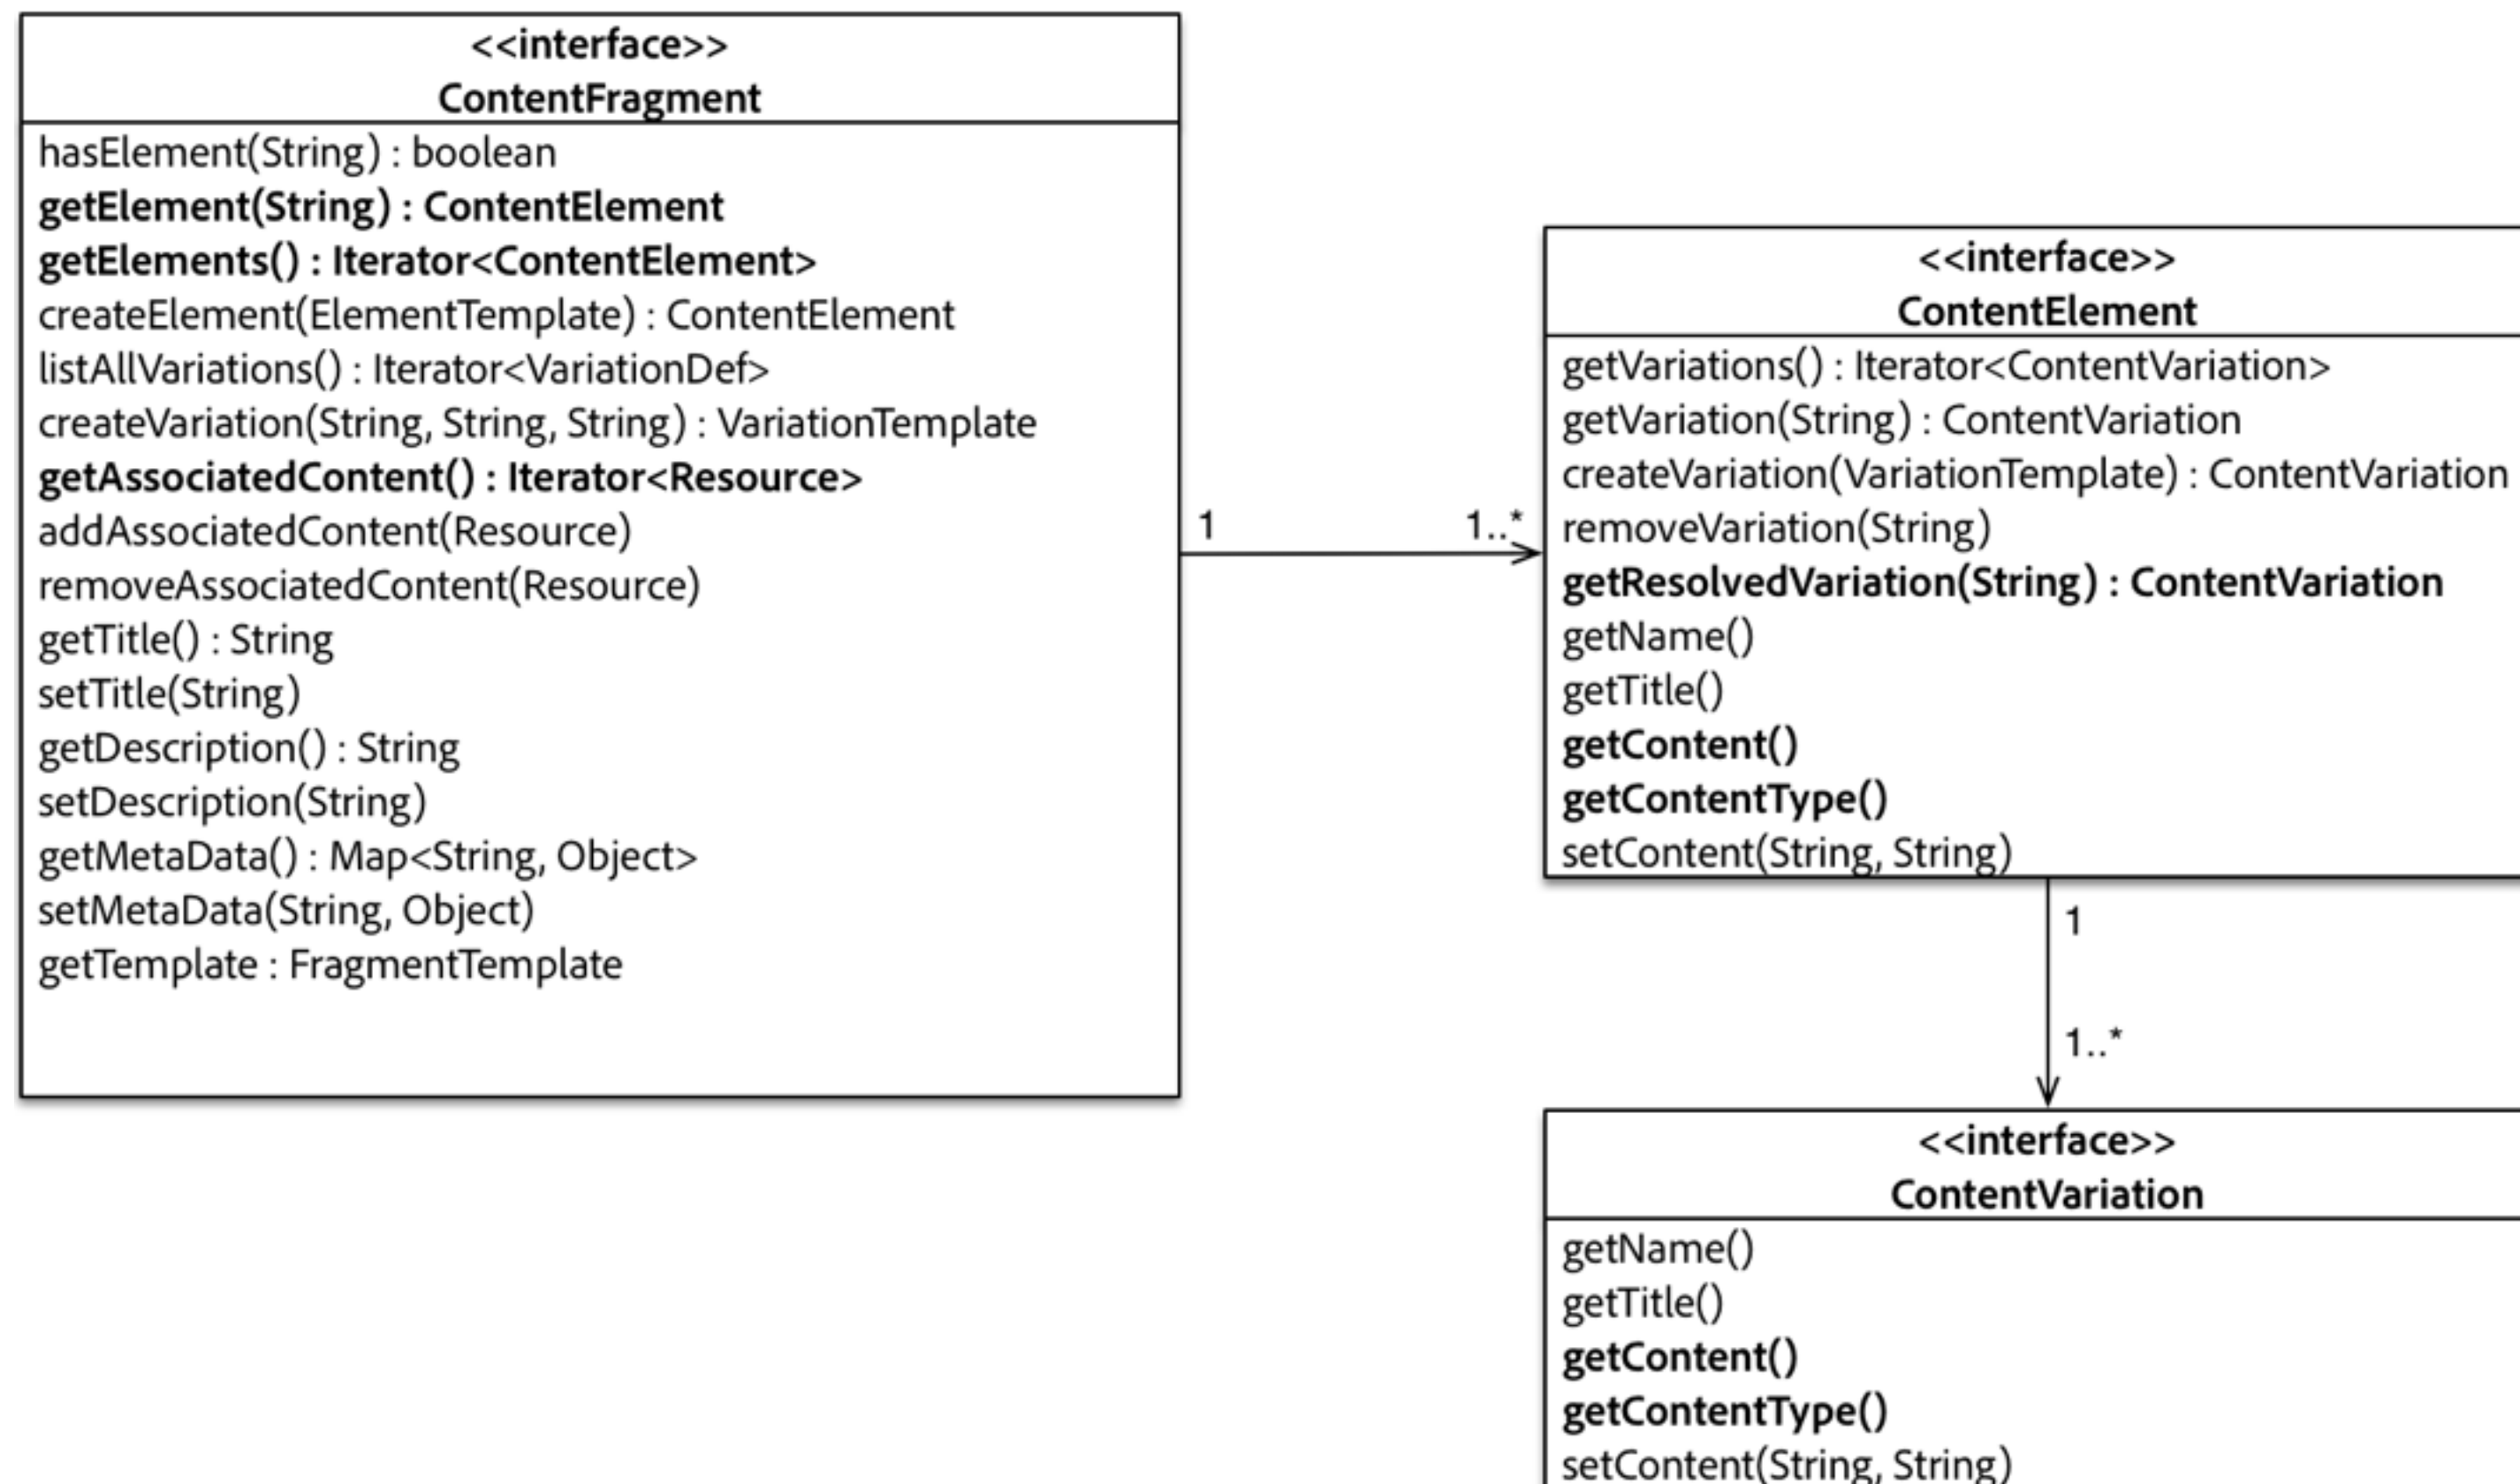

- Simple node structure defines available elements
- Out-of-the-box templates defined in:  
/libs/settings/dam/cfm/templates
- Custom templates can be defined in either:  
/apps/settings/dam/cfm/templates  
/conf/global/settings/dam/cfm/templates  
/conf/PROJECT/settings/dam/cfm/templates

More on /conf: <http://bit.ly/aem-conf>

# Coral UI 3

- Custom Elements
- No data-\* attributes
- No cui-contentloaded event
- No underlying JS object; the element itself is the object

# Coral UI 2 - NumberField

```

<div class="coral-InputGroup" data-init="numberinput" data-min="0" data-max="10"
  data-default-value="5">
  <span class="coral-InputGroup-button">
    <button class="js-coral-NumberInput-decrementButton coral-Button coral-Button--square"
      type="button" title="Decrement">
      <i class="coral-Icon coral-Icon--sizeXS coral-Icon--minus"></i>
    </button>
  </span>
  <input class="js-coral-NumberInput-input coral-InputGroup-input coral-Textfield"
    type="text"/>
  <span class="coral-InputGroup-button">
    <button class="js-coral-NumberInput-incrementButton coral-Button coral-Button--square"
      type="button" title="Increment">
      <i class="coral-Icon coral-Icon--sizeXS coral-Icon--add"></i>
    </button>
  </span>
</div>

```

# Coral UI 3 - NumberField

```
<coral-numberinput min="0" max="10" value="5"/>
```

# Granite UI

## New CoralUI 3-based

- **Components:** `/libs/granite/ui/components/coral/foundation`
- **Client Library:** `granite.ui.coral.foundation`

## Existing CoralUI 2-based remains

- **Components:** `/libs/granite/ui/components/foundation`
- **Client Library:** `granite.ui.foundation`

# Granite UI - Layouts

- Moving away from layout concept
- The new components don't use it anymore
- To increase the simplicity of understanding of Granite UI
- Each layout component becomes a standard component
- The layout mechanic itself is still there if needed

# Granite UI w/ Layout

```
+ mytabs
- sling:resourceType = "granite/ui/components/foundation/container"
+ layout
- sling:resourceType = "granite/ui/components/layouts/tabs"
+ items
+ tab1
- jcr:title = "Tab 1"
- sling:resourceType = "granite/ui/components/foundation/container"
+ tab2
- jcr:title = "Tab 2"
- sling:resourceType = "granite/ui/components/foundation/container"
```

# Granite UI w/o Layout

```
+ mytabs
- sling:resourceType = "granite/ui/components/coral3/foundation/tabs"
+ items
+ tab1
- jcr:title = "Tab 1"
- sling:resourceType = "granite/ui/components/foundation/container"
+ tab2
- jcr:title = "Tab 2"
- sling:resourceType = "granite/ui/components/foundation/container"
```

Thank you!
